

Safety Day encourages responders to focus on risk and prevention rather than possible negative outcomes. It aims to promote the advancement of safety measures for both the community and the profession. It is important to educate providers about seeking help when needed due to stress and mental health issues associated with caring for patients, especially when caring for children.

Safe Transport of Children by EMS: **Interim Guidance**

THE CODE GREEN **CAMPAIGN**

We call code strokes, code STEMIs, and code traumas. It is time we called a code alert on our mental health.
